Re: Kool-it Product

Steve,

I wanted to take a minute to let you know what I am hearing from our customer base, in regards to your Kool-it, cooling system additive.

I have to tell you that the positive feedback so far has been phenomenal! I have customers reporting back, that within minutes of introducing your product to the cooling system...Measurable electrical current will drop 10 fold! This will be a fantastic aid to reducing Electrolysis failures.

In addition, we have anecdotal evidence of its ability to "equalize" pH problems in the cooling system as well.

Lastly, I have had customers telling me of your products ability to lower operating temperatures of their customer's vehicles. One reported an 11-degree drop upon application.

I now have customers that sell dozens of radiators each month, that will sell a bottle with every sale of a new radiator.

Thanks for your help, and please pass on to anyone, how impressed my customers are with your additive!

A handwritten signature in blue ink, appearing to read "Michael R. Stoehr". The signature is fluid and cursive.
